**Allowable Subject Matter**

1. Claims 1-9 are allowed.
2. The following is an examiner's statement of reasons for allowance:

None of the prior art of record taken singularly or in combination teaches or suggests a method of detecting and resolving a partition condition in a cluster of computers in a computer network by creating and dividing a message pad into plurality of slots, each slot been associated with each one of the computers in the cluster(s); on an event there is a change of membership in the cluster of computers, each node recording/writing a generation number and list of known nodes having therein an identifier written in the list for each node that is known to a writing node into the respective slot, the method further comparing each slot to assure that the generation number and the list of known nodes matches in all the slots associated with each node and resolving a split-brain/partition situation by creating a list of surviving nodes and re-allocating appropriate resources to each of the surviving nodes **in combination with the functional limitation** of ordering a first node, which is not on the created list of surviving nodes to halt execution by allowing a second node on the list of the surviving nodes to write a termination message into a slot associated with the first node (as recited in claim 1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should
